*Emerging Substances:

Methamphetamine

A powerful synthetic stimulant with high addiction potential, capable of producing short-term euphoria, alertness, and energy but frequently causes increased/irregular heart rate, paranoia, and anxiety. It is a DEA Schedule II drug.

Local Anesthetics

Local anesthetics (commonly Lidocaine, Procaine, and Tetracaine) can increase the severity of other responses to illicit drugs, and at high levels (toxicity) can trigger their own symptoms, like seizures.

Trending Substances

- May continued to show an increase in the presence of methamphetamine in tested samples (from 12% to 31%).
- Compared to last month, there were fewer isolated cocaine samples in May (tests that showed only cocaine present). In response, the percentage of samples with a more traditional polysubstance use mix (i.e. fentanyl and medetomidine) increased.
